

Green infrastructure

Quality Impulse, South and East sand areas

Project goal

Establishment of a development corporation to build, develop and operate an area of new agricultural development. This is part of the Nederweert pilot scheme, the aim of which is a vigorous and livable rural environment, leaving room for both intensive livestock farming and the development of the natural environment and recreational amenities.

Purpose

Restructuring of the pig farming industry through an integrated solution which will benefit the natural environment, the living environment and the economy in the region.

Scheduled completion – to be determined

Current status

The draft Plan of Approach has now been completed. Details and implications are discussed with local pig farmers and the local authority in the spring of 2001. The blueprint for establishing a Developmentcompagny is ready.

Nieuwe Hollandse Waterlinie

Project goal

Improve part of the waterlinie (strip of land flooded as a defence line).

Purpose

The old defence line must become a mega canal in the Randstad and arrange a place on the list of Unesco World Heritage.

Scheduled completion – 2014

Current status

Research of the possibilities for public parties to participate are hopeful.

Many parties have indicated to be interested.
