1. Introduction

1.1. Overview of the document content.

The document includes a list and description of publicly available services provided by the ARES2 system.

Within this document, the scope, significance, and explanation of terms (symbols) in the diagrams for the Catalog of REST API services are provided. This catalog serves for reading from the source database through client-server communication based on the REST service interface.

This document pertains to both the interface and the method of data processing and exchange data formats. Our derived model of the REST API is based on the LDM diagram, which serves as a template for creating the REST interface.

The document presents a list of services along with their descriptions, including input (filters) and output values.

The services can be found here: <https://ares.gov.cz/swagger-ui/>.

Quick search by IČO (Identification Number) or by Business Name can be performed directly by entering the URL with a parameter. For IČO 00006974, the URL syntax is as follows: <https://ares.gov.cz/ekonomicke-subjekty?ico=6947>. For the business name 'Ministerstvo financí' (Ministry of Finance), the URL syntax is as follows: <https://ares.gov.cz/ekonomicke-subjekty?obchodniJmeno=ministerstvo+financi>.

<https://ares.gov.cz/ekonomicke-subjekty?obchodniJmeno=Ministerstvo+financi>

2. Service Catalog

2.1. Description of services

The core of the model is the REST service “EkonomickéSubjektySluzba”, which is used to search for economic entities in ARES. It is the method by which we provide the client with data about economic entities in the ARES system. The REST interface utilizes the POST and GET methods. The PUT, PATCH, and DELETE methods are not available.

The REST interface is accessible at the following address: <https://ares.gov.cz/ekonomicke-subjekty-v-be/rest/>.

The GET method is used to retrieve detailed information about an economic entity based on the specified IČO in the core of ARES or in the data source.

The POST method is used to search for a list of economic entities based on criteria specified in the filter. Filters are detailed in the subchapter Parameters for each data source.

2.1.1. Return values of services

Code	Description
200	OK
400	Input error
401	Authentication error
403	Access denied
404	Source not found
500	Unexpected error

2.1.2. Error codes

In case of an unsuccessful service call (codes 400, 401, 403, 404, 500), the service returns an error object with the following parameters:

Parameter name	Type	Length	Description
kod	STRING	-	Error code enumeration type. See the 'List of error codes'.
Description	STRING	-	Error description
subKod	STRING	-	Error subcode

The code represents the main area where the error occurred. The subcode is an optional item that can provide a more detailed specification of the error.

2.1.2.1 List of error codes

Error code	Description
OBEČNA_CHYBA	General error
CHYBA_VSTUPU	Input error

Error code	Description
NENALEZENO	Record not found
NENI_IMPLEMENTOVANO	Not implemented
NEPRIHLASENY_UZIVATEL	Unauthenticated user
NENI_OPRAVNENI	Permission missing

2.1.2.2 List of error subcodes

Subcode	Text	Description
VSTUP_PRILIS_MNOHO_ICO	The limit for the number of entered IČO has been exceeded. The maximum limit is {0} IČO.	The maximum allowed number of entered IČO has been exceeded in the query.
VSTUP_NEVALIDNI_FORMAT_ICO	The entered IČO format is incorrect. Please adjust the search parameters.	The entered IČO format is not valid.
VSTUP_PRAZDNY	No value was entered for the search. Adjust the search parameters.	No parameters were provided in the call filter for searching an economic entity.
VYSTUP_SUBJEKT_NENALEZEN	No subject matching the entered parameters was found. Adjust the search parameters.	No subject matching the entered parameters was found.
VYSTUP_PRILIS_MNOHO_VYSLEDKU	The query returns too many results ({0}). A maximum of {1} results is allowed. Adjust the search parameters.	The number of found subjects is higher than the allowed limit.
VSTUP_NEVALIDNI_FORMAT_ATRIBUTU	The entered format of attribute {0} is incorrect. Adjust the search parameters.	The entered format of the attribute is not valid.
VSTUP_PRILIS_MNOHO_HODNOT	The limit for the number of entered {0} has been exceeded. The maximum limit is {1}.	The limit for the number of entered values has been exceeded.
VSTUP_NEVALIDNI_FORMAT_ICOID	The entered format of IČOID is not valid. Please adjust the search parameters.	The entered format of IČOID is not valid

2.2. Working with Filters

2.2.1. Technical Parameters of Filters

Part of the POST method filter includes the technical section that controls return values – sorting, count, and the beginning of the enumeration (if pagination is needed).

These attributes are as follows:

Parameter name	Type	Length	Description
start	INT	-	Position from which the results will be taken according to the filter; a mandatory parameter.
pocet	INT	-	Number of records in the response; mandatory parameter.
razeni	Array of STRING	-	Method of used sorting; optional parameter.

From this list, the attributes 'start' and 'pocet' are mandatory.

2.2.2. Filtering Rules

The logic of using filters consists of logical operators AND and OR. Individual filter attributes are linked with logical AND. In the case of enumerative attributes (i.e., when multiple values of the same attribute are specified in the field), individual values are separated by the OR operator.

2.2.3. Parameters Requirement

For each attribute, the 'Required' column specifies whether the attribute is mandatory and, if applicable, how many values the service can return or needs to be given.

For example:

- [1] – the attribute is mandatory, and there is always exactly one
- [0..1] – the attribute is optional, and there can be a maximum of one
- [0..*] – the attribute is optional, with no maximum limit
- [1..*] – the attribute is mandatory, with no maximum limit
- [0..100] – the attribute is optional, with a maximum limit of one hundred
- [1..100] – the attribute is mandatory, with a maximum limit of one hundred
