Methodological description:

The statistical reports are designed in relation to the profit/loss statements. Items are selected in such a structure to conform to the parameters according to the GFSM 2014 (Government Finance Statistics Manual 2014) prepared by the International Monetary Fund. For this reason, some operations were excluded: such as incomes from the sale of securities and shares and securities sold shares, foreign exchange gains and losses, write-offs, creation and use of reserves and provisions, etc.

In comparison with the ESA, transactions with non-financial assets are not taken into account (profit/loss statement does not include information on non-financial assets and investment grants). Accounting depreciation of non-financial assets is used as a proxy for consumption of fixed capital.
